

# SYNOPSYS®

## *Inspiring the Next Generation of Technology Leaders*

At Synopsys, we seek to develop the next generation of technology and its leaders around the world, making a lasting and measurable difference in the fields we know best.

Synopsys helps improve the quality of life and economic vitality of our community. We accomplish this by actively partnering with local organizations, encouraging employee leadership, and providing financial donations. Our long term success is directly linked to the well-being of the global economy.

Synopsys has a rich history of philanthropy in the communities where we live and work. Our donation strategy focuses on science and math primary education. Employees give their valuable resources of time and money to a variety of ongoing activities through giving campaigns, volunteerism, matching gift program and computer donations.

In 1999, Synopsys established the Synopsys Silicon Valley Science and Technology Outreach Foundation to promote interest in math and science through project-based learning for teachers and students in grades K-12. Since establishing the "Synopsys Outreach Foundation," Synopsys has donated more than \$7.5 million to promote science fair participation and create advanced science research facilities.

### Highlights

- o Synopsys Outreach Foundation serves 115,000 students and teachers annually
- o Synopsys employees provided 20,000 hours of time, money and goods to the community on behalf of our 20<sup>th</sup> Anniversary celebration
- o Synopsys and the Synopsys Foundation donate \$1.4 million annually to primary education programs at 12 offices around the world
- o Employees participate in more than 120 community activities at 45 offices
